

Part 8: API Testing (Postman) – SauceDemo

Testing backend endpoints to ensure correct login, product listing, cart management and checkout functionality without relying on the UI.

The screenshot displays the Postman application interface. On the left sidebar, the 'Collections' tab is active, showing a collection named 'SauceDemo API Tests' with several requests listed, including 'Log in Request'. The main workspace shows the 'Log in Request' selected. The request is a POST to 'https://dummyjson.com/auth/login' with a raw JSON body containing 'username': 'emilys' and 'password': 'emilyspass'. The response is a 200 OK status, and the JSON body shows a successful login with an 'accessToken', 'refreshToken', 'id', 'username', and 'email'.

Request Details:

- Method: POST
- URL: `https://dummyjson.com/auth/login`
- Body Type: raw
- Body Content:

```
1 {
2   "username": "emilys",
3   "password": "emilyspass"
4 }
```

Response Details:

- Status: 200 OK
- Time: 2.85 s
- Size: 2.35 KB
- Body Type: JSON
- Body Content:

```

1. Endpoints Tested

The following API endpoints were tested:

Login: POST /auth/login

Product Listing: GET /products

Add to Cart: POST /carts/add

View Cart: GET /carts/user/1

2. Positive & Negative Scenarios

Positive Scenarios

Valid login credentials successfully returned an authentication token

Product listing returned a structured list of products

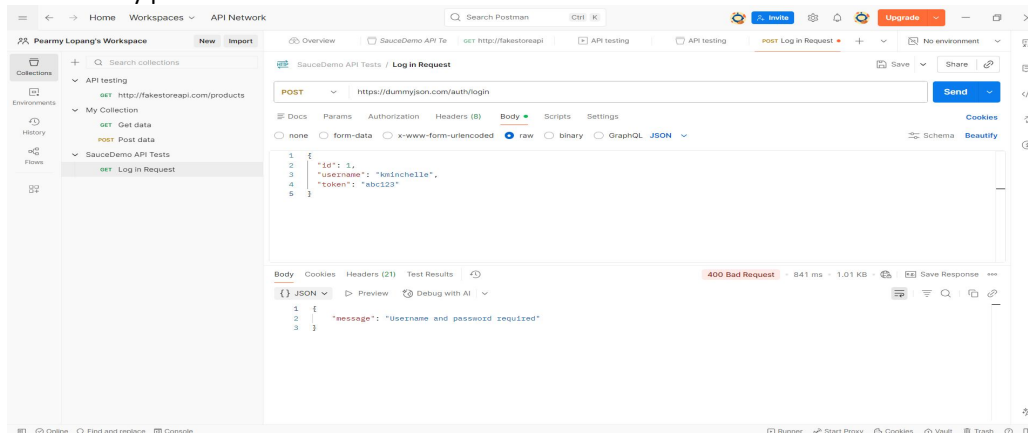

Items were successfully added to the cart with correct quantities

View cart returned accurate cart details for the user

Negative Scenarios

Invalid login credentials returned 401 Unauthorized

API correctly prevented access when authentication failed

3. Response Validations

Status Code Validation

200/201 OK → Returned for all successful requests

401 Unauthorized → Returned for invalid login attempts

JSON Structure Validation

Login response contains a token field

Product listing response contains a products[] array

Cart response contains:

carts[]

Nested products[] with product details.

Data Integrity Validation

Product data includes correct fields (title, price, category, stock)

Cart responses correctly reflect:

Product IDs

Quantities

Total price and discount values

Data returned matches expected API schema and values
