

Part 9: Performance / Load Testing (JMeter) – SauceDemo

The screenshot shows the Apache JMeter 5.6.3 Summary Report window. The left sidebar displays the test plan structure: Test Plan, Thread Group, HTTP Request, View Results Tree, Aggregate Report, and Summary Report (selected). The main panel shows the Summary Report for the selected HTTP Request. The report includes fields for Name, Comments, and options to write results to a file or read from a file. A table displays the test results with columns: Label, # Samples, Average, Min, Max, Std. Dev., Error %, Throughput, Received KB/sec, Sent KB/sec, and Avg. Bytes. The table shows two rows: HTTP Request and TOTAL. The HTTP Request row has 100 samples, an average of 171 ms, a minimum of 5 ms, and a maximum of 2359 ms. The TOTAL row has 100 samples, an average of 171 ms, a minimum of 5 ms, and a maximum of 2359 ms. The error percentage is 0.00% for both. The throughput is 10.2/sec for both. The received and sent KB/sec are 16.83 and 1.14 respectively for both. The average bytes are 1697.6 for both. At the bottom, there are checkboxes for 'Include group name in label?', 'Save Table Data', and 'Save Table Header'.

Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB/sec	Sent KB/sec	Avg. Bytes
HTTP Request	100	171	5	2359	475.15	0.00%	10.2/sec	16.83	1.14	1697.6
TOTAL	100	171	5	2359	475.15	0.00%	10.2/sec	16.83	1.14	1697.6

1. Average Response Times

Overall Average: 171 ms

Minimum Response Time: 5 ms

Maximum Response Time: 2359 ms

The system responds quickly on average, but the very high max value (2359 ms) indicates occasional slow responses under load

2. Peak Concurrent Users Handled

Total Requests (Samples): 100

Throughput: 10.2 requests/second

3. Error Rates

Error Percentage: 0.00%

Failed Requests: 0

No request failures occurred

System is stable and reliable under current load

No Bottle necks identified
